

INTRODUCING THE

AIR ★ DISC

Created with the aid of an engineering company to be more aerodynamically designed!

- **More weight is focused in the middle of the disc - the center dome is larger.**
This allows the disc to be more balanced.
- **The outer ring of the disc is angled toward the center of the disc, keeping the air flow pushing down on the center of the disc. This is similar in design conception to the airfoil of a racing car.**
- **There are 8 cutouts in this disc, allowing the disc to glide through the air more efficiently.**
- **Both the yellow and black play the same.**
- **Official tournament weight and size.**
